

# Diffraction for Engineers: A Linear Systems Formulation

In Preparation by James E. Harvey  
For SPIE Optical Engineering Press

## Table of Contents

<i>Preface</i> .....	xiii
<i>Acknowledgements</i> .....	xv
<b>Chapter 1. Introduction and Overview</b> .....	1
1.1 Introductory Comments .....	1
1.2 Motivation for this Tutorial Text .....	2
1.3 Organization of the Text .....	3
<b>Chapter 2. Fundamental Mathematical Tools Required</b> .....	7
2.1 Fourier Transform Techniques and Linear Systems Theory .....	7
2.1.1 Symbolic Notation for Special Functions .....	7
2.1.1.1 One Dimensional Functions .....	7
2.1.1.2 The Impulse Function .....	10
2.1.1.3 The Even Impulse Pair .....	11
2.1.1.4 The Odd Impulse Pair .....	11
2.1.1.5 The Comb Function .....	11
2.1.1.6 Separable Two-dimensional Functions .....	12
2.1.1.7 Rotationally Symmetric Functions .....	17
2.1.2 The Fourier Integral Transform .....	20
2.1.2.1 One-dimensional Fourier Transform Pairs .....	21
2.1.2.2 The Two-dimensional Fourier Transform .....	22
2.1.2.3 Symmetry Properties of Fourier Transforms .....	23
2.1.2.4 Hankel or Fourier-Bessel Transform .....	23
2.1.2.5 Two-dimensional Fourier Transform Pairs .....	24
2.1.3 Convolution and Autocorrelation .....	25
2.1.3.1 The Graphical Method .....	25
2.1.3.2 Convolution by direct Integration .....	28
2.1.3.3 Convolution by Numerical Integration .....	29
2.1.3.4 Existence Conditions .....	30
2.1.3.5 Properties of Convolution .....	31
2.1.3.6 Cross-correlation and Autocorrelation .....	35

2.1.4	The Basic Theorems .....	36
2.1.5	Linearity and Shift-invariance .....	38
2.1.6	Gibbs' Phenomenon.....	40
2.2	Vector Analysis and Direction Cosine Space Theory .....	43
2.2.1	The Direction Cosines of a Vector .....	45
2.2.2	Direction Cosine Space and the Direction Cosine Diagram.....	46
2.2.3	Relationships between $\alpha$ - $\beta$ space and $\theta$ - $\phi$ space .....	47
2.2.4	Applications of the Direction Cosine in Optics .....	49
2.3	Mathematical Description of Optical Wave Fields (Scalar wave Fields) .....	50
2.3.1	The Complex Amplitude of an EM Field .....	50
2.3.2	Plane wave Fields .....	51
2.3.3	Spherical Wave Fields .....	52
2.3.4	Angular Spectrum of Plane Waves .....	52
2.3.5	The Poynting Vector and Irradiance .....	53
2.4	Radiometric Quantities and their Relationship to Complex Amplitude .....	55
2.4.1	The Solid Angle .....	55
2.4.2	Definitions and Terminology .....	56
2.4.3	The Fundamental Theorem of Radiometry .....	58
2.4.4	Lambertian Sources and Lambert's Cosine Law .....	58
2.4.5	The Radiometry of Imaging Systems (Brightness Theorem) .....	60
2.4.6	Numerical Aperture and Focal Ratio ( $F^\#$ ).....	61
2.4.7	The Cosine-Fourth Illumination Fall-off .....	63
2.5	References .....	64
<b>Chapter 3. Foundations of Scalar Diffraction Theory.....</b>		<b>67</b>
3.1	Historical Development of Scalar Diffraction Theory .....	68
3.1.1	The Discovery of Diffraction.....	68
3.1.2	Huygens' Wavefront Construction Principle.....	69
3.1.3	Young's Interference Experiment.....	70
3.1.4	The Huygens-Fresnel Principle .....	70
3.1.5	The Fresnel-Kirchoff Formulation.....	71
3.1.6	The Rayleigh-Sommerfeld Diffraction Integral.....	72
3.2	Fresnel and Fraunhofer Diffraction .....	73
3.2.1	The Fresnel Approximation (and the Fresnel Criterion) .....	74
3.2.2	The Fraunhofer Approximation (and the Fraunhofer Criterion) .....	76
3.3	Examples of Fraunhofer Diffraction Patterns .....	79
3.3.1	The Rectangular Aperture.....	79
3.3.2	The Circular Aperture .....	81
3.3.2.1	The Rayleigh Criterion for Angular Resolution.....	83
3.3.2.2	Other Image Quality Criteria.....	84

3.3.3	Double circular aperture (Young's Interference Pattern) .....	85
3.3.4	Annular Apertures.....	86
3.3.5	Highly Obscured Annular Apertures .....	88
3.3.6	Apodized Apertures .....	91
3.4	Paraxial Grating Behavior (Coarse Gratings) .....	91
3.4.1	Dispersive Behavior of Diffraction Gratings.....	94
3.4.2	The Sinusoidal Amplitude Grating .....	100
3.4.3	The Square Wave Amplitude Grating (Ronchi Ruling) .....	103
3.4.4	The Sinusoidal Phase Grating.....	106
3.4.5	The Rectangular Phase Grating .....	110
3.4.6	The Blazed Reflection Grating .....	115
3.5	The Fresnel Zone Plate as an Imaging Element .....	124
3.6	Babinet's Principle of Complementary Apertures .....	127
3.6.1	Complementary Screens of Infinite Extent.....	127
3.6.2	Complementary Screens of Finite Extent .....	129
3.7	Edge Diffraction and the Spot of Arago (Circular Obscuration) .....	138
3.7.1	Axial Irradiance Distribution for Annular Apertures .....	139
3.7.2	Transverse Irradiance behind a Circular Obscuration .....	147
3.7.3	Imaging with an Opaque Disc.....	150
3.8	Numerical Calculations of Fraunhofer Diffraction Patterns .....	151
3.8.1	An Equilateral Triangle Aperture .....	152
3.8.2	A Semi-circular Aperture.....	154
3.8.3	A Parallelogram Aperture .....	155
3.8.4	A Right Triangle Aperture .....	155
3.8.5	Summary of Symmetry Considerations .....	156
3.8.6	The Effects of Random Phase Variations .....	157
3.9	Sources of Error in Discrete Fourier Transforms (DFT's).....	158
3.10	References .....	159

#### **Chapter 4. A Linear Systems Formulation of Non-paraxial Scalar**

	<b>Diffraction Phenomena.....</b>	<b>165</b>
4.1	The Diffracted Wave Field as a Superposition of Plane Waves .....	165
4.1.1	Basic Assumptions.....	166
4.1.2	The Direct Application of Fourier Transform Theory.....	166
4.1.3	The Transfer Function of Free Space .....	167
4.2	The Diffracted Wave Field as a Superposition of Spherical Waves .....	170
4.2.1	The Impulse Response of the Diffraction Process.....	170
4.2.2	General Rayleigh-Sommerfeld Formula (convolution integral)..	171
4.3	Geometrical Configuration of the Observation Space .....	171
4.3.1	Diffracted Wave Field on a Plane.....	172
4.3.2	Diffracted Wave Field on a Hemisphere .....	173

4.4	Aberrations of Diffracted Wave Fields .....	175	
4.4.1	The Conventional Wavefront Aberration Function .....	175	
4.4.2	Aberrations Inherent to the Diffraction Process .....	176	
4.4.3	The Fraunhofer Criterion Determined by a Defocus Tolerance ..	178	
4.4.4	Distortion and the Location of Diffraction Grating Orders .....	179	
4.4.5	Experimental Observations of Coma and Astigmatism.....	185	
4.5	Radiance: The Fundamental Quantity in Non-paraxial Scalar Diffraction Theory .....	188	
4.5.1	Diffracted Radiance: Shift-invariant in Direction Cosine Space.	190	
4.5.2	Re-normalization in the Presence of Evanescent Waves.....	192	
4.6	Summary.....	196	
4.7	References .....	197	
<b>Chapter 5. Non-paraxial (Wide-angle) Behavior of Diffraction Gratings..</b>			<b>199</b>
5.1	The Planar Grating Equation and Sign Convention.....	199	
5.2	“Conical” Diffraction in Direction Cosine Space.....	201	
5.3	The General Grating Equation and the Direction Cosine Diagram .....	207	
5.4	Angular Anomalies that appear to Violate the Grating Equation.....	209	
5.5.2	Experimental Observations .....	209	
5.5.3	The Effects of Finite Beam Size .....	211	
5.5.4	Comparison with Experimental Measurements .....	215	
5.5.5	Concluding Remarks Concerning Angular Grating Anomalies ..	217	
5.5	Diffraction Efficiencies of Various grating Types .....	218	
5.5.1	Sinusoidal Amplitude gratings.....	218	
5.5.2	Square-wave Amplitude Gratings.....	221	
5.5.3	Sinusoidal Phase gratings .....	225	
5.5.4	The Classical Blazed Grating .....	236	
5.5.4.1	The Refractive Blazed Grating.....	236	
5.5.4.2	The Reflective Blazed Grating.....	2xx	
5.6	Summary and Conclusions .....	2xx	
5.7	References.....	2xx	
<b>Chapter 6. Diffraction as a Superposition of Gaussian Beamlets.....</b>			<b>263</b>
6.1	Gaussian Beam Basics .....	263	
6.1.1	Beam Power and Irradiance .....	xxx	
6.1.2	Beam Divergence.....	xxx	
6.1.3	The Phase of a Gaussian Beam.....	xxx	
6.1.4	The Rayleigh Range.....	xxx	
6.2	The Gaussian Beam as a Solution to the Paraxial Wave Equation.....	xxx	
6.3	Diffracted wave Fields as a Superposition of Gaussian Beamlets.....	xxx	

6.4	The Propagation of Gaussian Beams .....	xxx
6.4.1	Rotational Symmetry .....	xxx
6.4.2	Orthogonality (Simply Astigmatic) .....	xxx
6.4.3	General Astigmatic .....	xxx
6.5	Physical Optics Analysis using Gaussian Beam Decomposition .....	xxx
6.5.1	Fraunhofer Diffraction of a Rectangular Aperture .....	xxx
6.5.2	Fraunhofer Diffraction of a Circular Aperture .....	xxx
6.5.3	Circular Aperture with Aberrations .....	xxx
6.5.4	Modeling an Interferometer using Gaussian Beam Summation .....	xxx
6.6	Other Advanced Applications.....	xxx
6.7	Advantages and Limitations of Gaussian Beam Summation.....	xxx
6.8	References.....	xxx
<b>Chapter 7. Linear Systems Model of Surface Scatter Phenomena.....</b>		<b>285</b>
7.1	Surface Characteristics .....	285
7.1.1	The Surface Autocovariance Function .....	286
7.1.2	The Surface Power Spectral Density Function .....	287
7.2	Specular and Diffuse Reflectance (Total Integrated Scatter).....	289
7.3	The Bidirectional Reflectance Distribution Function ( <i>BRDF</i> ) .....	291
7.4	Historical Background of Surface Scatter Theory .....	293
7.4.1	Rayleigh-Rice ( <i>RR</i> ) Surface Scattering Theory .....	295
7.4.2	Beckmann-Kirchhoff ( <i>BK</i> ) Surface Scattering Theory.....	304
7.4.3	The Harvey-Shack ( <i>HS</i> ) Surface Scatter Theory .....	312
7.5	A Modified Beckmann-Kirchhoff Surface Scatter Theory .....	326
7.5.1	Non-intuitive Experimental Scattering Data.....	326
7.5.2	Qualitative Explanation of Non-intuitive Scatter Data.....	328
7.5.3	Empirical Modification of the Classical <i>BK</i> Theory .....	332
7.5.4	Experimental Validation: Rough Surfaces at Large Angles.....	334
7.5.5	Comparison with Rayleigh-Rice Theory for Smooth Surfaces ...	337
7.6	The Generalized Harvey-Shack Surface Scatter Theory.....	340
7.6.1	A Transfer Function for Large Incident and Scattered Angles....	341
7.6.2	Smooth Surface Approximation of the Generalized <i>HS</i> Theory .	342
7.6.3	The Inverse Scattering Problem for Smooth Surfaces.....	347
7.6.4	Rough Surface Scatter Calculations .....	350
7.7	Applications Requiring Knowledge of Surface Scatter Behavior.....	352
7.8	References .....	354
<b>Chapter 8. Other Practical Optical Engineering Examples.....</b>		<b>361</b>
8.1	Diffraction Effects of Telescope Secondary Mirror Spiders .....	361
8.1.1	Introduction.....	361
8.1.2	Image Quality Criteria .....	363
8.1.3	Strehl Ratio .....	364

8.1.4	Fractional Encircled Energy .....	365
8.1.4.1	Empirical Equation for Spider Diffraction Effects.....	369
8.1.4.2	Validation of Empirical Equation.....	373
8.1.4.3	Parametric Encircled Energy Plots.....	374
8.1.4.4	Arbitrary Spider Shapes .....	377
8.1.5	Other Obscurations and Particulate Contamination.....	379
8.1.6	Modulation Transfer Function .....	381
8.1.7	Summary and Conclusions .....	385
8.1.8	References.....	385
8.2	Diffraction-limited Performance of Phased Telescope Arrays.....	389
8.3	Hole Grating Beam Samplers .....	xxx
8.4	Wavefront Error Correction Systems using Deformable Mirrors .....	xxx
8.5	References.....	xxx
<b>APPENDIX A: Discovery and Development of Diffraction Gratings .....</b>		<b>xxx</b>
<b>APPENDIX B: Characteristics of the Spot of Arago .....</b>		<b>xxx</b>
<b>APPENDIX C: Wavefront Aberration Theory .....</b>		<b>xxx</b>
<b>APPENDIX D: Distortion Exhibited by Diffraction Grating Patterns .....</b>		<b>xxx</b>
